MULTICLIPSYSTEM

For twintip-ski, skis with groove and splitboards

Components Multiclipsystem

Knife

Elastic Strap (2x)

Butterfly (2x)**

Soft wood panel

Jig

Manual Multiclipsystem Additionally required: hammer, pen, cutting pad

Remove the protective foil in nose section abt. 10cm (4") and tail section abt. 40cm (16") from the skin. Center the skin on the ski

Peel the skin back about 35cm (14") from ski tail.

Place the jig between skin and ski tail, using marks to guide you. You can attach either a K-Clip or a Butterfly-Clip System! Do not glue the jig with the marks onto the adhesive side of the skin. Observe the notes on the template!

Stick the skin onto the already positioned jig.

Remove the skin from the ski with jig. Replace the protective foil on nose section on the skin.

Fold the strap along perforated line backwards. Put the skin on an appropriate cutting pad.

Pound the tips, so that they lie flat against the skin. Repeat these steps for the second skin.

Cut the skin along line, closely following the jig. Remove the jig from the skin and repeat these steps with your second skin.

Attach the chosen system: 1 K-Clip oder 2 Butterfly.

VIDEO at kohla.at

Remove the protective foil approx. 5 cm from the skin. Place the skin with the adhesive side up in the longitudinal direction on the wood panel and place the Elastic Strap on the trimmed skin. Pound the teath with a hammer straight through the skin.

Replace the protective foil on the skin

and turn it over. Pound the tips on the

direction of the end of the skin, so they are

skin side flat with a hammer in the

at a slight angle.
